Quiz 2: Policy Evaluation

10/10 points (ungraded)

Consider the same gridworld as in the previous quiz, where Left and Right actions are successful 100% of the time.

Specifically, the available actions in each state are to move to the neighboring grid squares. From state **a**, there is also an exit action available, which results in going to the terminal state and collecting a reward of 10. Similarly, in state **e**, the reward for the exit action is 1. Exit actions are successful 100% of the time.

The discount factor (γ) is 1.
